August 2009

Easier assembly on a wall means they move in faster

In just a few years, small birds have been given a far greater choice with regard to diet and accommodation. Small, charming houses are transformed into a practical and well-visited dining area with just a few simple manoeuvres. The multi-nesting box that won the 2006 garden product of the year prize has now been joined by two new versions, especially produced for quick and easy assembly directly on to a wall or a tree trunk. Two screws and it's ready for moving into.

Even the feeding solution for the winter is somewhat different. Instead of a feed tray, the birds sit on pegs and eat from small, round holes in the bottom of the house. The food is protected from rain and foul weather and the pins ensure that droppings end up falling directly on the ground. The new feeding solution also makes it difficult for larger birds such as crows and magpies to help themselves to the midday meal. It's easy to remove the roof and bottom of the house for refilling and cleaning, and there are small notches in the walls on the inside to make it easier for the young birds to get out through the hole and test their wings.

Product information

Name: Multiholk
Article number: WG213-WG214
Material: Wood painted with environmentally friendly paint.
Dimensions: 240 x 240 x 265
RRP: £52.50
Where to buy: Visit our website at www.wildlifegarden.co.uk to find local stockists or our web shop or call 0115 917 0084

For further information or if you would like us to send a Multiholk for examination, kindly contact;
