#### The Combi Feeder

*-The versatile bird feeder*

***Leftovers from dinner? The garden birds would be more than happy to take them off your hands! The Combi Feeder can be filled with food scraps, apples, suet balls or nut mixes. You name it!***

A piece of pork rind or other scraps of meat are very much appreciated during the cold winter months when wintering birds have a high energy demands. Blackbirds and waxwings like it when the Combi Feeder is filled with apple. Sparrows and tits favour energy-rich peanuts or suet balls. The product has been developed in collaboration with ornithological experts.

The insert is easy to fit inside or outside the Combi Feeder, depending on what it is to be filled with. It is used for the feeding of peanuts, nut mixes or food scraps. Without the insert, the Combi Feeder can be used for apples or suet balls.

#### Avoid uninvited guests

The Combi Feeder can simply and easily be hung in a tree or on a hook. Thanks to its height, you avoid uninvited guests such as rats and mice. The short perches mean that only small birds, finches and woodpeckers can settle. When the long perches are used, large birds such as blackbirds can also settle. If no perches are used, you have chosen only to serve tits and woodpeckers.

#### Product facts
